TECHNICAL PROJECTS

Novel Constellation - High-Traffic Web Platform [Live Site]	React, Node.js, Full Stack Architecture
Architected and deployed a production web novel platform featuring daily chapter updates, persistent reading state, dynamic library bookmarking, and sub-second page transitions.	
Reddit Clone - Mobile Social Discussion Platform [GitHub]	React Native, Python, MongoDB
Developed a cross-platform mobile community app featuring real-time subreddit feeds, recursive nested comment threads, and high-concurrency MongoDB query optimization.	
Campus Find - Real-Time Lost & Found Mobile Utility [GitHub]	React Native, Firebase, Google Maps API
Built a real-time campus lost-and-found mobile utility with interactive geolocation tagging, live Firestore state synchronization, and instant retrieval push notifications.	
MangaTracker Automated Bot - High-Concurrency Release Pipeline [GitHub]	Python, Telegram API, Web Scraping
Engineered an asynchronous Telegram pipeline monitoring 70+ publication sources with anti-bot mitigation, delivering automated chapter updates with zero manual intervention.	
Engi-Notes - Collaborative Academic Repository [Live Demo]	React, Node.js, MongoDB
Built a collaborative academic repository for engineering students to upload, categorize, and search semester notes, syllabi, and study resources.
